

## Sprint 2 Review

### Expectations

1. There should be a UI prototype (beyond wireframes).

Had a working demo of user login, register user, landing page, movie search. Could have made UI more appealing.

2. Create an end user.

Functionality implemented

3. Model and import data from a single source

Were able to query data from IMDB API and populate search results

4. Search for a movie and return information about the movie (movie info, a trailer, or ratings)

Comments:

5. The team pushes only branches to origin and uses pull-requests for all merges to master.

There are 5 branches and use PR for merging.

6. master on origin is protected so (2a) is enforced. Hint: see settings on the team repo.

Yes.

7. Work is being managed in Jira.

JIRA looks good. Had 30+ items in back log. Very well distribution of tasks among teammates.

8. Jenkins runs on all pull-request submissions. It runs the test stage, which has Junit tests and code quality reports. Jenkins catches all failures in the test stage and blocks the merge to master. Jenkins should inform the team of failure either in Slack or email.

Jenkins runs on PR. Integrated with Slack. Using Junit tests to capture reports on Jenkins

9. Any stretches achieved

SonarQube integration done. Github integration working as well. Had maintained cookies for session management. Profile page also looks good. Trying to implement notifications feed.

**Grade: A**
